The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

¹ The management expense ratio is based on total expenses (excluding commissions and other portfolio transaction costs and withholding taxes) for the stated period and is expressed as an annualized percentage of daily average net asset value during the period. The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. ¹ The management expense ratio is based on total expenses (excluding commissions and other portfolio transaction costs and withholding taxes) for the stated period and is expressed as an annualized percentage of daily average net asset value during the period. The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

As at December 31, 2021 and 2020

STRATEGY IN USING FINANCIAL INSTRUMENTS**Objective of the Fund**

To provide investors with an attractive balance of current income and capital appreciation by investing primarily in a combination of Canadian equity and equity-related securities and fixed-income securities

Strategy of the Fund

For the equity portion, the Fund invests primarily in companies providing a stable income or consistent dividends. The Fund may also invest in foreign securities as well as warrants, and derivatives, the latter to aid in hedging against potential losses resulting from changes in the prices of the securities that the Fund has invested in as well as any exposure from foreign currencies

The principal risk factors of this Fund are credit risk, interest rate risk, special equities risk, market risk, foreign currency risk and derivatives risk

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

¹ The management expense ratio is based on total expenses (excluding commissions and other portfolio transaction costs and withholding taxes) for the stated period and is expressed as an annualized percentage of daily average net asset value during the period. The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

¹ The management expense ratio is based on total expenses (excluding commissions and other portfolio transaction costs and withholding taxes) for the stated period and is expressed as an annualized percentage of daily average net asset value during the period. The management expense ratios reflected are those presented in the Fund Facts for each series.

² The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

2. BASIS OF PRESENTATION AND SIGNIFICANT ACCOUNTING POLICIES

BASIS OF PRESENTATION

Statement of Compliance

The policies applied in the preparation of these financial statements are in accordance with International Financial Reporting Standards (IFRS). The financial statements have been authorized for issue by the Audit and Risk Management Committee of the Company on April 12, 2022.

SIGNIFICANT ACCOUNTING POLICIES

The significant measurement and presentation policies applied to prepare these financial statements are described below

Financial Assets and Liabilities

Upon initial recognition, financial assets and liabilities are recorded at fair value. The Funds' financial assets consist primarily of investments in non-derivative financial instruments and derivative financial instruments presented in the Schedule of Investment Portfolio. Financial liabilities consist primarily of derivative financial instruments

Financial assets and liabilities are recognized on the date that the Funds become a party to the contractual provisions of the instrument, namely the trade date of the financial instrument

Financial assets are derecognized when the rights to receive cash flows from the investments have expired or the Funds have transferred substantially all the risks and rewards of ownership

Classification and Measurement

The Funds classify and measure financial instruments in accordance with IFRS 9, *Financial Instruments*. Financial assets are measured at amortized cost, at FVTPL or at fair value through other comprehensive income depending on the contractual cash flow characteristics and the business model for managing the financial assets

The portfolios of financial assets are managed and performance is evaluated on a fair value basis. The Funds are primarily focused on fair value information and use that information to assess the assets' performance and to make decisions. The contractual cash flows of the Funds' debt securities are solely principal and interest, however, these securities are neither held for the purpose of collecting contractual cash flows nor held both for collecting contractual cash flows and for sale. The collection of contractual cash flows is only incidental to achieving the Funds' business model's objective. Consequently, all investments are measured at FVTPL

The Funds' obligation concerning net assets attributable to Contract Owners is recorded at the redemption amount which approximates fair value. The accounting policies used to measure the fair value of investments and derivative financial instruments are identical to those used in measuring the net asset value for transactions with Contract Owners, except when the closing price for financial assets and liabilities is not within the bid-ask spread

As at December 31, 2021 and 2020, there are no differences between the Funds' net asset value per unit for transactions and their net assets attributable to Contract Owners per unit in accordance with IFRS

Impairment

As for the impairment model, it is applicable to financial assets, loan commitments and financial collateral contracts, except for financial instruments at FVTPL or designated at fair value through other comprehensive income

With respect to financial assets measured at amortized cost, the Funds consider both historical analysis and forward-looking information in determining any expected credit loss. As at the financial statement date, all financial assets measured at amortized cost are due to be settled within the short term. The Funds consider that the risk of default of these financial assets is low and that the counterparties have a strong capacity to meet their contractual obligation in the near term. Given the limited exposure of the Funds to credit risk from financial assets recorded at amortized cost, no loss allowance has been recognized as no such impairment will have a significant impact on the financial statements

Determination of the Fair Value of Financial Instruments

Fair value is the price that would be received from selling an asset or paid to transfer a liability in an orderly transaction between market participants at the valuation date. The fair value of financial assets and liabilities traded in active markets are based on quoted market prices at the close of trading on the valuation date. The Funds use the closing price for both financial assets and financial liabilities when this price falls within the bid-ask spread. In circumstances when the closing price is not within the bid-ask spread, the Company determines the point within the bid-ask spread that is most representative of fair value based on the specific facts and circumstances

The fair value of financial assets and liabilities that are not traded in an active market, including over-the-counter derivative financial instruments, is determined using valuation techniques. The Funds use a variety of methods and make assumptions that are based on market conditions existing at each valuation date

Valuation techniques include the use of comparable recent arm's length transactions, the fair value of other instruments that are substantially the same, discounted cash flow analysis, option pricing models and other techniques commonly used by market participants and which use observable inputs. Refer to Note 7 "Financial Instruments Disclosures" for further information about the Funds' fair value measurements

Cash

Cash (bank overdraft) is measured at cost, which approximates fair value

Money Market Securities

Money market securities are recorded at cost including accrued interest, which closely approximates fair value

Equities, Index-Based Investments and Exchange Traded Funds

Equities, index-based investments and exchange traded funds are recorded at the closing price of the stock exchange on which the corresponding security is principally traded. Unlisted warrants are valued with a recognized valuation model, including Black-Scholes

NOTES TO THE FINANCIAL STATEMENTS (continued)

Bonds, Mortgage-Backed Securities and Asset-Backed Securities

Bonds, mortgage-backed securities and asset-backed securities are valued based on prices obtained from recognized securities dealers

Investment Funds

The underlying funds' units are generally valued based on the net asset value per unit provided by the underlying fund's manager on each valuation day

Derivative Financial Instruments

Certain Funds may use an array of derivative financial instruments such as foreign currency forward contracts, forward contracts and standardized futures contracts for hedging purposes or purposes other than hedging, or both. The fair value of derivative financial instruments takes into account the impact of legally binding master netting agreements, if applicable. Refer to the section "Offsetting Financial Assets and Financial Liabilities" for further information about the Funds' offsetting

Foreign Currency Forward Contracts and Forward Contracts

The fair value of these instruments corresponds to the gains or losses that would result from the contract close-out on the valuation date; this value is recorded in "Unrealized appreciation (depreciation) on derivatives" in the Statement of Financial Position

Standardized Futures Contracts

Standardized futures contracts are valued at fair value and are settled daily through brokers acting as intermediaries. Any amounts receivable (payable) from the settlement of standardized futures contracts are recorded in "Receivable (Payable) on standardized futures contracts" in the Statement of Financial Position

Valuation of Unlisted Securities and Other Investments

When the valuation principles of the aforementioned investments are not appropriate, fair value is determined according to the Company's best estimates, based on established valuation procedures and on prevailing market conditions on each valuation date. These procedures cover, among others, securities no longer traded, securities issued by private corporations and illiquid securities. For further information, refer to Note 3 "Critical Accounting Judgments, Estimates and Assumptions"

Investment Transactions

Investment transactions are accounted for on the trade date. Cost is determined on an average cost basis except for money market securities, for which the cost is determined using the First In First Out method. The average cost does not include amortization of premiums or discounts on fixed-income securities with the exception of stripped bonds. Transaction costs, such as brokerage commissions, incurred in the purchase and sale of securities by the Funds, are recognized in the Statement of Comprehensive Income. The difference between the unrealized appreciation (depreciation) of investments at the beginning and at the end of the period is included in "Net unrealized gain (loss) on investments" in the Statement of Comprehensive Income. On disposal of an investment, the difference between the fair value and the cost of the investment is included in "Net realized gain (loss) on investments" in the Statement of Comprehensive Income

Securities Lending Activities

Certain Funds may enter into securities lending, repurchase transactions and reverse repurchase transactions through the securities lending program of the Funds' custodian, Desjardins Trust Inc. (Trust)

The securities loaned and repurchased are not derecognized in the Statement of Financial Position as substantially all the risks and rewards of ownership of these securities are retained

To limit the risk that the counterparty fails to fulfill its obligations, the Funds obtain collateral, representing at least 102% of the contract amount, determined daily based on the fair value of the previous business day's securities loaned or repurchase transactions. The collateral for reverse repurchase transactions is at least 100%. Securities received as collateral in securities lending transactions are not recognized in the Statement of Financial Position as substantially all the risks and rewards of ownership of these securities have not been transferred to the Funds. Cash guarantees received for securities lending and repurchase transactions are recognized as financial assets in the Statement of Financial Position, in "Cash guarantee received for securities lending" or "Cash guarantee received for repurchase transactions", as appropriate. A liability representing the obligation to return the securities is recognized in "Commitments related to securities lending" or "Commitments related to repurchase transactions", as appropriate. Cash guarantees given for reverse repurchase transactions are recognized as financial liabilities in the Statement of Financial Position, in "Cash guarantee given for reverse repurchase transaction". An asset representing the commitment to receive the securities is recognized in "Commitments related to reverse repurchase transactions"

Trust, as the Funds' custodian, may use those amounts to buy investments. Revenue generated through the Trust's securities lending program is shared by the Fund and the Trust at the rate presented in the section "Notes to the Financial Statements – Specific Information" pertaining to each Fund. This revenue is included in "Revenue from securities lending activities" in the Statement of Comprehensive Income

Offsetting Financial Assets and Financial Liabilities

A financial asset and a financial liability must be offset in the Fund's Statement of financial position when, and only when, the Fund has a legally enforceable and unconditional right to offset the amounts and intends either to settle on a net basis or to realize the asset and settle the liability simultaneously. The Fund has a legally enforceable and unconditional right to offset a financial asset and a financial liability when such right is enforceable in the normal course of business and in the event of default, insolvency or bankruptcy

Over-the-counter derivative financial instruments, securities lending and repurchase agreements, receivable for investments sold and payable for investments purchased are subject to master netting or similar agreements that do not meet the criteria for offsetting in the Statement of Financial Position as they give a right to an offset that is enforceable only in the event of default, insolvency or bankruptcy

Other Assets and Liabilities

Premiums receivable, receivable for investments sold, cash guarantee received for securities lending and repurchase transactions, commitments related to reverse repurchase transactions as well as interest, dividends and other receivables are measured at amortized cost

Similarly, accrued expenses, withdrawals payable, payable for investments purchased, commitments related to securities lending and repurchase transactions, cash guarantee given for reverse repurchase transactions as well as interest, dividends and other payables are measured at amortized cost

Given the short-term nature of other assets and liabilities, their carrying amount approximates their fair value

Income

Interest for attribution purposes from investments in debt securities presented in the Statement of Comprehensive Income is recognized as it is earned. This category can include other incomes. The Funds do not amortize premiums paid or discounts received on the purchase of debt securities except for stripped bonds. Dividends are recognized as income on the ex-dividend date. Income received from exchange traded funds and income trusts are presented in "Dividends". Notional distributions received from ETFs are considered non-cash transactions and increase the average costs for those ETFs. Amounts from investments that are treated as a return of capital for income tax purposes reduce the average cost of those investments. Foreign interest and dividend income are accounted for on a gross basis and are included in the income section of the Statement of Comprehensive Income

The income from Limited Partnership includes income attributed for tax purposes and are presented in "Distributions from underlying funds". Distributions received from underlying funds are recorded at the date of distribution. They are included in "Distributions from underlying funds" and are presented in the Statement of Comprehensive Income. Distributions received in the form of units from underlying funds are presented in "Non-cash distributions from investments" in the Statement of Cash Flows

On derivative financial instruments contract close-out, the gains and losses from derivative financial instruments held for hedging purposes are included in "Net realized gain (loss) on derivatives" of the Statement of Comprehensive Income. Gains and losses from derivative financial instruments held for purposes other than hedging are included in "Net income (loss) from derivatives" of the Statement of Comprehensive Income

Foreign Currency Translation

The Funds' financial statements, premiums and withdrawals are denominated in Canadian dollars, the Funds' functional and presentation currency. Foreign currency assets and liabilities denominated in a foreign currency are translated into the functional currency at the exchange rate on each valuation date. Purchases and sales of securities, as well as income and expenses denominated in foreign currencies are translated into the functional currency at the exchange rates prevailing on the transaction dates

Foreign exchange gains and losses relating to cash are presented as "Foreign exchange gain (loss) on cash" and those relating to other financial assets and liabilities are presented within "Net realized gain (loss) on investments" and "Net unrealized gain (loss) on investments" in the Statement of Comprehensive Income

Increase (Decrease) in Net Assets per Unit from Operations Attributable to Contract Owners

The increase (decrease) in net assets per unit from operations attributable to Contract Owners, presented in the Statement of Comprehensive Income, is calculated by dividing the increase (decrease) in net assets from operations attributable to Contract Owners by the average number of units outstanding during the period

Income Taxes

Under the *Income Tax Act* (Canada), each Fund is treated as a segregated fund trust. The Fund's income, as well as gains or losses realized, if any, are allocated to Contract Owners on a regular basis. In the case of interest that accumulates in a registered account, Contract Owners will not receive annual tax slips. However, any amount paid to Contract Owners or former Contract Owners may be subject to be taxed in their hands. On the other hand, for interest that accumulates in a non-registered account, Contract Owners will receive an annual tax slip for any income, gains or losses allocated. Under current tax laws, Funds do not pay income taxes, except for any foreign tax withholdings that may apply

Investments in Entities

The Funds meet the definition in IFRS 10, *Consolidated Financial Statements*, of investment entities and account for their investments in underlying funds at FVTPL

According to IFRS 12, *Disclosure of Interests in Other Entities*, the Funds must disclose specific information on their investments in other entities, such as subsidiaries, associates and structured entities

Subsidiaries

An entity is considered as a subsidiary when it is controlled by another entity. The Fund controls an entity when it has the right to variable returns from its involvement with the entity and through its power over the entity

Associates

Associates are investments in entities over which the Fund exercises significant influence without, however, exercising control

NOTES TO THE FINANCIAL STATEMENTS (continued)

Structured Entities

Structured entities are conceived in a way that the right to vote and other similar rights are not determining factors in exercising control. The Company has determined that its investments in underlying funds (including limited partnerships), index-based investments (including exchange traded funds), mortgage-backed securities and asset-backed securities are structured entities, unless the specified relationship is different. Total values of those investments in the table "Fair Value Hierarchy" also represent the fair value of investments in structured entities

Refer to the section "Notes to the Financial Statements – Specific Information" pertaining to each Fund for more information on entities

3. CRITICAL ACCOUNTING JUDGMENTS, ESTIMATES AND ASSUMPTIONS

The preparation of financial statements requires the Company to use judgment in applying its accounting policies and to make estimates and assumptions about the future. Actual results may differ from these estimates. The following paragraphs discuss the most significant accounting judgments and estimates that the Funds have made when preparing the financial statements

Fair Value Measurement of Derivative Financial Instruments and Securities not Quoted in an Active Market

The Funds may hold financial instruments that are not quoted in active markets, including derivative financial instruments. Fair value is determined based on models that make maximum use of observable inputs and rely as little as possible on unobservable inputs. The Funds consider the data observable if that market data is readily available, regularly distributed or updated, reliable and verifiable, not proprietary and provided by independent sources that are actively involved in the relevant market. The models used to determine fair values are validated and periodically reviewed by experienced personnel of the Company

When no quoted prices are available, the fair value is estimated using present value or other valuation methods, which are influenced by the assumptions used concerning the amount and timing of estimated future cash flows and discount rates, which reflect varying degrees of risk, including liquidity risk, credit risk, risks related to interest rates, exchange rates, and price and rate volatility

The calculation of the fair values may differ given the role that judgment plays in applying the valuation techniques and the acceptable estimation. Fair value reflects market conditions at a given date and, for this reason, it may not be representative of future fair values. Refer to Note 7 "Financial Instruments Disclosures" for further information on fair value measurement of financial instruments

Classification and Measurement of Investments

In classifying and measuring financial instruments held by the Funds, the Company is required to make significant judgments about the business model in which the portfolio of investments and derivatives is held. The Company has determined that the Funds' business model is one on which the portfolios are managed and performance is evaluated on a fair value basis. For further information on financial instruments, refer to Note 2 "Basis of Presentation and Significant Accounting Policies"

4. NET ASSETS ATTRIBUTABLE TO CONTRACT OWNERS

Structure of the Funds and the Units Attributed

The Funds are wholly owned assets of Desjardins Financial Security, which have been segregated from the Company's other assets. The Funds' assets may only be used to pay benefits under the Contracts

Each Fund has a series of units, which are attributed to Contracts for the purpose of determining the value of benefits to the units attributable to those Contracts. A Contract Owner acquires no direct claim on the units or assets of a Fund by purchasing a Contract but only the benefits that are provided under the Contract

Units within the same series of Funds have the same net asset value per unit. Subject to the Company's administrative rules, Contract Owners have the right to make transactions under their Contracts such as premiums, withdrawals and switches between units of Funds. Because of these transactions, units are attributed to and withdrawn from the Contract based on each Contract's terms and conditions or as provided by law. Since the Contract Owner does not own units of a Fund, ownership of units cannot be sold or transferred to another party. There are no voting rights associated with the units of the Fund

Classification of Units Attributable to Contract Owners

The Funds' outstanding units qualify as "puttable instruments" as required by the IAS 32, *Financial Instruments: Presentation* (IAS 32). IAS 32 states that units that include a contractual obligation for the issuer to repurchase or redeem them for cash or another financial asset should be classified as financial liabilities. The Funds issue different series of notional units attributable to Contract Owners that are equally subordinated but have different features

In addition, the Funds have a contractual obligation to attribute annually any taxable income that allows the Contract Owners to request cash payment for any attributions. These features breach the requirements for the units to be presented as equity under IAS 32. Consequently, the Funds' outstanding units are classified as financial liabilities in these financial statements

Valuation of the Units

The units of a Fund are valued according to the administrative rules established by the Company and in accordance with the Contract and all laws and regulations applicable to the Funds

These units differ with respect to redemption charges and management fees charged to each series (See Note 5). The net asset value per unit is determined on each market day by dividing the net assets attributable to Contract Owners by its outstanding units

Management of Risks Associated with Units Attributable to Contract Owners

Units attributed and outstanding are considered as the Funds' capital. The Funds are not subject to specific capital requirements on the premiums and withdrawals, other than certain minimum deposit requirements. Contract Owners are entitled to require payment of the net asset value per unit for all or any of the notional units they hold by giving an official notice to the Company at any time. Units attributable to Contract Owners are redeemable for cash equal to a pro rata share of the Funds' net asset value

5. MANAGEMENT FEES AND OTHER EXPENSES

Management Fees

In return for investment management, Desjardins Financial Security is paid a management fee from the Funds based on the net asset value of the units attributed to each series of each Fund and calculated daily

The management fees, as a percentage of the net asset value, are as follows:

NOTES TO THE FINANCIAL STATEMENTS (continued)

Operating Expenses

In addition to management fees, a charge is applied to each Fund for operating and administrative expenses relating to the Fund. Each Fund is also responsible for all applicable taxes, including Goods and Services Tax (GST) and Harmonized Sales Tax (HST) if any, and all brokerage commissions incurred by a Fund in buying and selling investments on behalf of a Fund

Management Expense Ratios

Some expenses (audit fees, legal fees, custodial fees, marketing costs, information technology costs, etc.) have been partially absorbed by the Company. Management expense ratios for all the Funds would be 77 basis points higher (44 basis points as of December 31, 2020) if these expenses had been charged to the Funds. A significant portion of these expenses absorbed by the Company is the result of the systems upgrade and various security-related initiatives currently underway. The Company does not intend to change its method of allocating costs

The management expense ratios for the past five periods, which include management, guarantee, operating expenses and taxes are as follows:

	December 31 2021 %	December 31 2020 %	December 31 2019 %	December 31 2018 %	December 31 2017 %

7. FINANCIAL INSTRUMENTS DISCLOSURES

DFS Preliminary Information

The net assets of the DFS Guaranteed Investment Funds are held by the Company. These Funds are not separate legal entities. The Contract Owners do not own any of the assets of the Funds nor own an interest in the Funds. However, the financial instrument risks resulting from the Funds are assumed by the Contract Owners. The value of the segregated funds may increase or decrease according to market fluctuations. Moreover, the Funds are offered with a deposit guarantee of 75 to 100% that protects the deposits until specific maturity dates.

For the Funds of funds, details regarding the top holdings of the underlying fund(s) are shown in the appendix of the Schedule of Investment Portfolio

Hierarchy of Financial Instruments Measured at Fair Value

The fair value measurement of financial instruments is determined using the following three levels of the fair value hierarchy:

- Level 1 – Measurement based on quoted prices (unadjusted) in active markets for identical assets or liabilities;
- Level 2 – Valuation techniques based primarily on observable market data;
- Level 3 – Valuation techniques not based primarily on observable market data

If inputs of different levels are used to measure the fair value of an asset or liability, the classification within the hierarchy is based on the lowest level input that is significant to the measurement

Measurement Monitoring

The Company is responsible for establishing the fair value measurements included in the Funds' financial statements, including Level 3 measurements. The Company obtains prices from a pricing agency, monitors and analyzes these prices daily. A Measurement Monitoring Committee established by the Company ensures that appropriate operating procedures and a proper monitoring structure are in place and followed. This Committee meets on a quarterly basis to review fair value situations. Reports are produced monthly and given quarterly to the Committee members. It also examines specific processes carried out by the Investment Fund Portfolio Department. Moreover, the Measurement Monitoring Committee establishes Measurement Policy orientation. On a quarterly basis, this Committee examines and approves the Level 3 measurements after obtaining confirmation of the measurements from each portfolio manager, as needed. The Committee signs off on any adjustments made to prices or estimates provided by the pricing agency

Establishment of Levels

A change in the fair value measurement method could result in a transfer between levels. The Funds' policy is to record the implications of the transfers between levels on the date of the event or change in circumstances behind the transfer.

The following types of investments may be classified as Level 3 if their prices are no longer based on observable inputs

a) Money Market Securities

Money market securities primarily include public sector and corporate securities. The inputs that are significant to valuation are generally observable. Public sector money market securities guaranteed by the federal or provincial government have been classified as Level 1. Other money market securities have been classified as Level 2

b) Equities

Equities are classified as Level 1 when the security is actively traded and a reliable price is observable. Certain equities do not trade frequently and therefore observable prices may not be available. In such cases, fair value is determined using observable market data and the fair value is classified as Level 2. If the determination of fair value uses significant unobservable data, then the fair value is classified as Level 3. Unlisted warrants are generally classified as Level 2

c) Index-Based Investments and Exchange Traded Funds

Index-based investments and exchange traded funds are classified as Level 1 when the security is actively traded and a reliable price is observable

d) Bonds

Public sector government bonds are classified as Level 1. Corporate bonds, which are valued using models with inputs including interest rate curves, credit spreads and volatilities are usually classified as Level 2

e) Mortgage-Backed Securities and Asset-Backed Securities

Mortgage-backed securities and asset-backed securities consist primarily of corporate securities, which are valued using models with inputs including interest rate curves, credit spreads and volatilities. Since the inputs that are significant to valuation are generally observable, mortgage-backed securities and asset-backed securities are usually classified as Level 2

f) Investment Funds

Public investment funds are classified as Level 1 when their prospectus is unrestricted and their price is reliable and observable. Since some investment funds are not public, their price is determined using observable market data and their fair value is classified as Level 2. If the measurement of fair value requires the use of significant unobservable inputs, then it is classified as Level 3

g) Derivative Financial Instruments

Derivative financial instruments consist of foreign currency forward contracts for which counterparty credit spreads are observable and reliable or for which the credit-related inputs are determined to be significant to fair value, are classified as Level 2

Detailed information concerning the fair value hierarchy of each Fund is available in their respective "Notes to the Financial Statements – Specific Information". For securities classified as Level 3, the valuation techniques and assumptions are also presented in their respective notes

Management of Risks Arising from Financial Instruments

Throughout their activities, the Funds are exposed to a variety of risks associated with financial instruments such as market risk (including currency risk, interest rate risk and price risk), concentration risk, credit risk and liquidity risk. The overall risk management strategy of the Funds focuses on the unpredictability of financial markets and optimizes the Funds' financial performance. Most investments involve a risk of loss

For the purpose of these financial statements, certain risks detailed in the Contract and Information Folder are associated with other risks. The market risk, the special equities risk, the sovereign risk and the risk of volatile markets and market disruption risk are presented under price risk. The credit risk and the derivatives risk are presented under credit risk

The Company monitors the Funds' risks on a quarterly basis and the Committee Performance of Manager and Investment Solutions of Desjardins Wealth Management and Life and Health Insurance reviews these risks on a quarterly basis

The COVID-19 pandemic has increased volatility in financial markets and has led to disruptions in people's lives such as travel and border restrictions, quarantines, supply chain issues, lower consumer demand and general market impacts. Uncertainty still exists as to the long-term implications. Such disruptions can affect the management of risks arising from financial instruments

Market Risk

Market risk is the risk that the fair value or future cash flows associated with a financial instrument will fluctuate because of a change in the relevant risk variables, such as interest rates, exchange rates and equity prices. The Funds' market risk is managed through diversification of the investment portfolios' exposure ratios. The return on investments held by the Funds is monitored by the Company monthly and reviewed by the Committee Performance of Manager and Investment Solutions of Desjardins Wealth Management and Life and Health Insurance on a quarterly basis

Currency Risk

Currency risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates

Currency risk is composed of monetary items (usually including cash, receivable amounts in foreign currencies, investments in fixed-income and money market securities) and non-monetary items (usually including investments in equities and investment funds). The non-monetary assets are classified according to the trading currency of the security

The Funds are exposed to currency risk by holding assets and liabilities denominated in currencies other than the Canadian dollar, the Funds' functional currency, as the value of the securities denominated in other currencies will fluctuate according to the prevailing exchange rates. The Funds may enter into foreign currency forward contracts to reduce their exposure to currency risk

The Funds' exposure to currency risk is shown based on the carrying value of financial assets and financial liabilities (including the notional amount of foreign currency forward contracts and foreign currency futures, if any)

When the Canadian dollar decreases in relation to foreign currencies, the value of foreign investments increases. Conversely, when the value of the Canadian dollar increases, the value of foreign investments decreases

Interest Rate Risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates

Interest rate risk occurs when an investment fund invests in interest-bearing financial instruments. Generally, the value of these securities increases if interest rates decrease and decreases if interest rates increase. The Company manages this risk by calculating and monitoring the average portfolio duration on these securities. The Funds also hold a limited amount of cash subject to variable interest rates, which expose them to cash flow interest rate risk

Price Risk

Price risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market price, other than those arising from currency risk or interest rate risk

NOTES TO THE FINANCIAL STATEMENTS (continued)

The Company manages this risk by carefully selecting securities and other financial instruments, in accordance with defined limits. The maximum risk resulting from financial instruments is determined by the fair value or contract value of the financial instruments. The Funds' overall market positions are monitored monthly by the Company and reviewed on a quarterly basis by the Committee Performance of Manager and Investment Solutions of Desjardins Wealth Management and Life and Health Insurance. The Funds' financial instruments are exposed to price risk arising from uncertainties about the future prices of instruments

Concentration Risk

Concentration risk arises because of the concentration of exposure within the same category, whether it is geographical location or industry sector. For Funds with an international investment strategy, the concentration by geographic location is presented according to, among other things, the country of incorporation or region. For Funds with a domestic investment strategy, the concentration by industry sector is presented according to their investments in the different sectors. The concentration risk is managed through portfolio diversification within the framework of the Funds' objective and strategy

Credit Risk

Credit risk is the risk that the financial instrument counterparty will be unable to pay the full amount at maturity. The Funds' credit risk is managed through an independent credit analysis from the Manager/sub-advisor, in addition to credit rating agencies analysis

Financial Instrument Transactions

The Funds are exposed to credit risk. The Funds' and the counterparty's respective credit risk are considered when determining the fair value of financial assets and liabilities, including derivative financial instruments. Transactions are settled or paid on delivery using approved brokers. The risk of default is considered limited as delivery of the securities sold is made once the broker has received payment

Payment is made on a purchase once the securities have been received by the broker. The trade will fail if either party fails to meet its obligations

However, there are risks involved in dealing with custodians or prime brokers who settle trades and, in rare circumstances, the securities and other assets deposited with the custodian or broker may be exposed to credit risk with regard to such parties. In addition, there may be practical problems or time delays associated with enforcing the Funds' rights to their assets in the case of an insolvency of any such party

The credit rating for fixed-income securities and money market securities is rated by credit rating agencies, which generally includes the *Dominion Bond Rating Service (DBRS)*, *Standard & Poor's* and *Moody's*. In cases where the credit rating agencies do not agree on a credit rating for fixed-income securities and money market securities, they will be classified following these rules:

- If two credit ratings are available, but the ratings are different, the lowest rating is used;
- If three credit ratings are available, the most common credit rating is used;
- If all three credit rating agencies have different ratings, the middle credit rating is used

The credit rating is then converted to *DBRS* format. Generally, the greater the credit rating of a security, the lower the probability of it defaulting on its obligations

Derivative financial instruments are financial contracts whose value depends on underlying assets. The vast majority of derivative financial instruments are negotiated by mutual agreement between the Funds and their counterparties, and include, among others, foreign currency forward contracts. Other transactions are carried out as part of trades and mainly consist of standardized futures contracts

Securities Lending Activities

Securities lending, repurchase transactions and reverse repurchase transactions expose the Funds to credit risk. These transactions are governed by Investment Industry Regulatory Organization of Canada participation agreements. The Funds also use netting agreements with counterparties to mitigate credit risk and require a percentage of collateralization (a pledge) on these transactions. The Funds only accept pledges from counterparties that comply with the eligibility criteria defined in their policies. These criteria promote quick realization, if necessary, of collateral in case of default. The collateral received and given by the Funds are mainly cash and government securities. Further information on assets pledged and received as collateral is presented in the "Notes to the Financial Statements – Specific Information" pertaining to each Fund

Liquidity Risk

Liquidity risk is the risk that the Fund will encounter difficulty in meeting obligations associated with financial liabilities

The Funds are exposed to daily cash redemptions of units. Most of their assets are therefore invested in liquid investments (i.e., investments that can be readily disposed of)

Some Funds may invest in derivative financial instruments, debt securities and unlisted equity investments that are not traded in an active market. As a result, some Funds may not be able to quickly liquidate their investments at amounts approximating their fair values or be able to respond to specific effects such as deterioration in the creditworthiness of any particular issuer

Units attributable to Contract Owners are redeemable upon request at the owner's option. However, the Company does not expect that the contractual maturity disclosed will be representative of the actual cash outflows, as Contract Owners of the instruments typically retain them for a longer period

The majority of the remaining liabilities are due within the next three months. Balances due within 12 months equal their carrying balances as the impact of discounting is not significant

Additional Information

For further information on the risks associated with financial instruments to which each Fund is exposed, refer to the section "Notes to the Financial Statements – Specific Information" pertaining to each Fund. Details on risks and various documents on underlying funds (detailed description of each Fund's investment policy and, where applicable, the investment policy and/or prospectus and financial statements of the underlying fund(s)) are available upon request by writing to the Company at the following address:

Our opinion

In our opinion, the accompanying December 31, 2021 financial statements of each Fund present fairly, in all material respects, the financial position of each Fund, its financial performance and its cash flows as at and for the periods indicated in note 1 in accordance with International Financial Reporting Standards (IFRS)

What we have audited

The financial statements of each Fund comprise:

- the statements of financial position as at the period-end dates indicated in note 1;
- the statements of comprehensive income for the periods indicated in note 1;
- the statements of changes in net assets attributable to contract owners for the periods indicated in note 1;
- the statements of cash flows for the periods indicated in note 1; and
- the notes to the financial statements, which include significant accounting policies and other explanatory information

Basis for opinion

We conducted our audit in accordance with Canadian generally accepted auditing standards. Our responsibilities under those standards are further described in the *Auditor's responsibilities for the audit of the financial statements* section of our report

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion

Independence

We are independent of each Fund in accordance with the ethical requirements that are relevant to our audit of the financial statements in Canada. We have fulfilled our other ethical responsibilities in accordance with these requirements

INDEPENDENT AUDITOR'S REPORT (continued)

Other matter – unaudited information

We have not audited, reviewed or otherwise attempted to verify the accuracy or completeness of the unaudited information which is comprised of the Summary Facts Statement, Top Major Holdings as of December 31, 2021 or Top Major Holdings of the Underlying Fund as of December 31, 2021 or Top Major Holdings of the Underlying Fund or Top 25 Holdings of the Underlying Fund or Top Five Holdings of the Underlying Funds Performance information for the period ending December 31, 2021 and Financial Highlights. Accordingly, this auditor's report and our opinion does not cover the aforementioned unaudited information

Responsibilities of management and those charged with governance for the financial statements

Management is responsible for the preparation and fair presentation of the financial statements of each Fund in accordance with IFRS, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error

In preparing the financial statements, management is responsible for assessing the ability of each Fund to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate any Fund or to cease operations, or has no realistic alternative but to do so

Those charged with governance are responsible for overseeing the financial reporting process of each Fund

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole for each Fund are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Canadian generally accepted auditing standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of the financial statements of each Fund

As part of an audit in accordance with Canadian generally accepted auditing standards, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements of each Fund, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control of each Fund
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management
- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the ability of each Fund to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements of each Fund or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause any Fund to cease to continue as a going concern
- Evaluate the overall presentation, structure and content of the financial statements of each Fund, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit
